TESA Entry Systems

Onity

The new key to flexible access management

An access management system must allow freedom of movement to authorized personnel while barring entry to others, in a cost-effective way. Onity solutions offer you the answer to managing your keying system without hassle, at an affordable cost. Lost keys and master keys will no longer be a problem once you have an Onity management system.

Onity locks and devices are stand-alone, providing a full range of features without the need for expensive wiring. They can also be integrated into on-line systems, in fact Onity solutions provide the ability to integrate off-line and on-line devices to meet your specific needs.

Onity systems can secure a single door or an entire network of buildings; they have been installed in such diverse areas as universities, hospitals, residential buildings, offices and many others.

**Simplify your
key management !**

Advantages

Cost savings

Purchasing new cylinders and changing the master key system because a key or master key is lost, stolen or duplicated adds up quickly. With Onity electronic locking systems you will never need to do this again.

The Onity access management system is the solution to increase security in your facility, while lowering costs and improving your image.

Increased security

A facility with electronic locks results in protected proprietary information and assets as well as safer people, generating increased efficiency. Just point and click, and you decide who can go where and when.

True enhanced image

When customers and visitors see Onity electronic locks on your doors, it makes an indelible impression about the quality of security and customer care found throughout your facility.

Discover the benefits of choosing an Onity access management solution:

Integra3 System

EntryFlex System

Multiapplication

Better key management

Managing thousands of keys and master keys that access different doors in different buildings is complicated. Add in lost, copied and stolen keys, and it's impossible. Onity takes out the hassles of managing your keying system.

Better service

Use the advantages of multi-application through Smart technology and offer additional services in a more convenient way. All users need to carry is one keycard!

Profit center

Take advantage of the new profit generating tools you are able to integrate into the system, such as vending machines, copying services, Internet access etc.

Open up with an Onity access management solution

Onity EntryFlex System

Onity access management systems are designed to offer flexibility and control at an affordable cost.

EntryFlex

The EntryFlex software package is the ideal electronic locking system for facilities which require a basic solution for their mechanical master keying needs. Enjoy the advantages of a virtually on-line system with 99% fewer wires than traditional hard wired systems and at 1/5 of the cost.

Onity dual locks feature a multi-technology reader enabling them to work with magnetic stripe and smart cards. EntryFlex combines the read/write capabilities in smart cards with the Onity Revalidator to achieve two-way communication between the stand alone locks and your main computer system.

With an audit trail of the last 500 transactions in the locks, EntryFlex manages up to 10,000 doors and 500 different masters.

Enjoy the advantages of multi-

Thanks to smart card technology, a variety of different applications can be integrated into one card. Taking advantage of these multi-application capabilities, the Onity access management solution shares the card with other systems facilitating the management of your installation.

Onity Integra3 System

Software

Integra3

This comprehensive lock management system offers the advantage of combining off-line (stand alone) and on-line devices, which results in a single integrated system. It supports both magnetic-stripe and Smart technologies. The Integra3 flexible solution can work together with other systems such as proximity readers, CCTV, alarms and presence controls.

The Windows® based easy to use software can be custom-designed to meet the specific needs. Through Integra3 facility managers can control from one to 65,000 doors and 65,000 users with up to 3,000 users per stand-alone lock, without requiring a single metal key.

What's more, these locks provide a complete audit trail of the last 1,000 events, which are recorded in non-volatile memory.

application

- Electronic purse
- Banking
- Identification
- Printing and photocopying
- Vending machines
- Internet access & bookings
- Telephone use
- University libraries
- Laundry facilities
- Gaming interface
- User history
- Pay TV
- Parking
- And of course, access management

Applications

1. Education

A campus with electronic locks on its doors says that it cares enough to take security to a high level.

Onity systems in student accommodation areas and dormitories provide the peace of mind they need, so that they can stop worrying about their personal security and robberies.

In addition, thanks to the advantages of multi-application through smart cards you can offer additional services to your students, improving your bottom line and enhancing the campus' image.

2. Corporate

Onity electronic locking systems make life easier for employees and facility managers, creating a modern and efficient atmosphere, improving the key management and saving money.

Transform the image of your company to that of a professional and trustable corporation using an Onity access management system.

3. Healthcare

A facility in the health environment can have hundreds or even thousands of doors that open to patients' or residents' rooms, administration offices, pharmacies and labs.

They are accessed by different people at different times, and a high level of security is required for the confidential documents, drugs and expensive equipment kept in them. Onity systems offer you the solution for an efficient operation, with an increased level of security while vastly improving key management.

4. Elderly housing

Whether your residents want privacy and the security that a locked door means, or doors need to remain unlocked for easy assistance and care, Onity locking systems are the solution for elderly housing.

Offer residents the convenience they expect through the use of a lightweight keycard. You will no longer need to worry about lost keys and forgetful users, issuing a new keycard will easy and efficiently solve the problem offering everybody convenience and peace of mind.

5. Residential Buildings

With electronic locks installed in their apartments Onity can offer convenience and at the same time security for their inhabitants.

You will no longer need to worry about lost keys, in addition you can have 'temporary' keys available for visitors and guests. No doubt electronic locks will be the future key for residential buildings.
